Remodeling Cost Estimator Guide

A step-by-step guide to calculating, understanding, and submitting your home remodeling estimate.

Owner: Tomer Blackburn | Phone: 773-403-9950

1. Getting Started with the Estimator

Our Remodeling Cost Estimator is designed to give you an accurate, real-time estimate of your renovation project. Whether you are remodeling a bathroom, kitchen, or a whole building, you can choose custom scopes and upgrade selections matching your budget.

Step 1: Choose Your Project Type

Begin by selecting the type of building or renovation you require. We offer configurations for residential homes, custom units, and commercial buildings. Selecting the right category helps us tailor the subsequent questions to your specific structural needs.

Step 2: Select Your Service

Depending on the project type, you can choose specific service packages (e.g. Demolition, Core Plumbing and Electrical, Fixture Installation, or Full Finishing). This section lets you focus only on the scope of work you actually want to be estimated.

Step 3: Answer Customize Questions

Inside the estimator flow, you will be asked a series of questions. These questions are color-coded to denote their pricing impact:

- White items: Informational / Included in the base package price.
- Blue items: Optional toggles that add a fixed upgrade price when enabled.
- Green / Orange items: Upgrades with multiple options (e.g., standard, mid-range, or premium tier selections) where the price changes dynamically.

2. Reviewing and Submitting

Step 4: Review Your Estimate

As you make selections, your estimated price updates in real-time in the floating price card. Once finished, input your contact information, project address, desired start date, and submit. An estimate PDF containing all details will be generated and emailed to you immediately.

What Happens After Submission?

1. Project Manager Review: Our team reviews your selections, notes, and photos/videos to confirm feasibility.
2. Site Measurement: We schedule a quick visit to take measurements and confirm structural details.
3. Proposal and Rendering: We generate a detailed architectural plan and 3D rendering for your final approval before construction starts.
